

AMENDMENTS TO THE CLAIMS

1. (Previously presented) A module-structure for roof trim for use in installing a roof trim and various accessories to an interior side of a vehicle roof panel by placing a bracket having a spacer function between the roof trim and the roof panel in the positions between the roof trim and the roof panel in the positions matching the accessories, said module-structure comprising:

attachment members formed on said accessories, wherein said attachment members are capable of being temporarily accommodated in said bracket, said bracket provided on the back side of the roof trim through openings in the roof trim so that accessories, roof trim and brackets can be temporarily secured with an end portion of the attachment member being located within a thickness of the bracket, said attachment member being protrudable from said bracket for alignment with and insertion into attachment holes in the roof panel thereby engaging connecting portions of the attachment member with the attachment holes of the roof panel; and

an inserted body inserted into the attachment members, wherein said inserted body locks the connecting portions of said attachment members by insertion so that said roof trim and accessories are integrally assembled to said roof panel through said bracket.

2. (Original) The module-structure for roof trim according to claim 1, wherein said attachment members are temporarily supported within said bracket by a securing structure where said bracket and said attachment members are temporarily secured in the sub-attaching position when said attachment members of said accessories are inserted into said brackets through said openings in said roof trim.
3. (Original) The module-structure for roof trim according to claim 2, wherein claws on one side and grooves on the other side, said grooves being engaged with the claws, are provided in the securing structure

between said attachment members of said accessories and said bracket.

4. (Previously presented) The module-structure for roof trim according to claim 3, wherein said attachment members of said accessories are held in a locked position by providing a second securing structure where said attachment members and said bracket are secured in a state in which said attachment members of said accessories protrude towards a vehicle body panel.
5. (Original) The module-structure for roof trim according to any of claims 1 through 4, wherein said brackets are composed of a resin molding formed in a hollow box shape and have a function to absorb an impact due to side collision of the vehicle.
